

ABSTRACT

A school, home or commercial desk that can be used for traditional tasks and yet provides readily available access to computer equipment. The computer in a desk is comprised of a desk body that houses the internal components of a standard computer; a desk top that houses the flat panel screen beneath a view panel that is mounted flush with the surface of the desk top; a keyboard tray that holds the standard computer keyboard; and a support system of four adjustable legs. The desk top, keyboard tray, and legs are all adjustable to suit the users specific ergonomic needs. The desk body consists of a front panel, back panel, right side panel, and left side panel, bottom panel, and top panel that give the computer in a desk its shape, support and access to available, installed computer components. Furthermore, the computer in a desk can be used for traditional and computer related tasks regardless of the user adjusted.
